## Plant Descriptions

**Canaan Fir** - Canaan Fir is an attractive and hardy evergreen that has a dense, pyramidal growth form. Short, deep green needles have silvery undersides. It can tolerate wet, clay soils better than other conifers, but it still prefers well drained soils.

---

**Balsam Fir** - Native to NY & Canada. Needles are 3/4 to 1-1/2" long, dark and shiny green. It prefers well-drained soil and north and east slopes. Balsam Fir is widely used as Christmas trees and an ornamental.

---

**Colorado Blue Spruce** - steel blue foliage. It prefers heavier soils with full sun. Trees will reach a height of six feet in eight years. This evergreen conifer is widely used in windbreaks when spaced 6 feet apart or as an ornamental yard tree.

---

**Fraser Fir**- This evergreen is known to be an excellent Christmas tree, partly because the needles aren't nearly as sharp as a spruce. This tree prefers well drained cool, moist soil.

**Elderberry** - American elderberry is a moderately-fast growing bush that can reach up to 12 feet tall and 6 feet across once mature. It can be planted outdoors successfully in USDA zones 3 through 9 and harvested once the berries are dark purple or black, typically in August or September.

**Eastern Redbud** - The Eastern Redbud tree is an American classic! Known for its showy reddish-purple blossoms, this flowering tree is one of the first plants to herald the arrival of spring. Use the American Redbud as a landscape focal point, or plant several in a row to create an unforgettable border.

**Highbush Blueberry - Duke** blueberry grows well in cooler climates and northern regions. It is known both for its early season fruit, which is large with a firm, crisp texture, and its high yield of berries. Bluecrop is one of the hardiest blueberries, withstands -20 to -30 degrees F. Berries resistant to cracking. Blue Crop is known for its consistent production. Mature at 5-6 feet with a 5-6' spread.

**Red Raspberry "Latham"** - Easy to pick! Firm berries provide durability during harvest. Adapts well to a range of soil types. Upright growth habit. Burgundy fall foliage adds landscape interest. Fruit is outstanding for fresh-eating, freezing, and canning. Cold-hardy. Ripens in mid July. Self-pollinating.

**Empire Apple** - This productive tree is disease-resistant to fire blight and cedar apple rust. Originates from Geneva, New York circa 1945. Introduced in 1966. Cold-hardy. Ripens in September.

**Honeycrisp Apple** - The Honeycrisp apple is a high quality apple which keeps well for 5-6 months in common storage. The tree is one of the most vigorous and hardy of apple trees, showing little damage at -40 degrees. Honeycrisp fruit is characterized by an exceptionally crisp and juicy texture

**Reliance Peach** - Reliance Peach trees are very hardy with a heavy crop production. The tree is great for cold climates and produces a medium-large fruit with a sweet flavor. This soft and juicy orange-red fruit ripens in early August and is great for canning. This tree will grow 12-20' tall and will bear pink flowers in early spring.

**Perennial Flower Pac** - Contains Dream Baby & Frances Fay Daylily, Mixed Peony & Snow Queen Iris, Stella De Oro Daylily. 2 of Each.

---

Our annual Tree and Shrub Program was a success with over 3,000 plants being sold to the residents of Fulton County. All stock is bareroot and for the purpose of conservation practices.
